Rúbrica 4: Sigue el tutorial MongoDB

Antes de empezar necesito tener instalado Docker y Docker Compose:

Ahora creamos el archivo docker-compose.yml y una carpeta donde guardarlo:

```
Símbolo del sistema - nano docker-compose.yml
GNU nano 7.1
                                                      docker-compose.yml
ersion: '3.7'
ervices:
mongodb container:
  image: mongo:latest
  environment:
     MONGO INITDB ROOT USERNAME: root
     MONGO_INITDB_ROOT_PASSWORD: rootpassword
  ports:
     - 27017:27017
  volumes:
     - mongodb data container:/data/db
olumes:
mongodb_data_container:_
```

Ahora levantamos el contenedor y lo comprobamos:

```
C:\Users\aleja\BBDD\mongoDB-docker>docker-compose up -d
 mongodb container 9 layers [PRERERER]
                                                      0B/0B
                                                                  Pulled

   Network mongodb-docker default
                                                          Created
 Volume "mongodb-docker_mongodb_data_container"
                                                          Created
 Container mongodb-docker-mongodb_container-1
                                                          Started
C:\Users\aleja\BBDD\mongoDB-docker>docker ps
CONTAINER ID
         IMAGE
                                     CREATED
                                                    STATUS
                    COMMAND
 NAMES
52c48f9f4c6a mongo:latest "docker-entrypoint.s..." About a minute ago Up About a minute 0.0.0.0:27017->27017/tcp
 mongodb-docker-mongodb_container-1
C:\Users\aleja\BBDD\mongoDB-docker>docker volume ls
DRIVER
      VOLUME NAME
local
      e8337873e5f14108ef88a163c23547050ac4d1a00ed8a114e5509e107d6a18c3
local
      mongodb-docker_mongodb_data_container
```

Vemos como sale en Docker Desktop:

Luego tenemos que instalar MongoDB Shell para conectarnos en localhost en el puerto que hemos asignado, el 27017:

```
C:\Users\aleja\BBDD\mongoDB-docker>mongo admin -u root -p rootpassword
```

También podríamos conectarnos desde DBeaver, DataGrip...
